Why Choose Jordi Analytical?

One of our goals 25 years ago was to provide the plastics industry with an expert in polymer analysis. Our reputation has been built on the principal of outstanding customer service, quick turnaround times and expert analysis for every job. Our capabilities and available techniques service a much larger customer base than just the polymer industry. We strive to work closely with all of our clients to solve any and all analytical problems.

Problems Solved

Deformation/Reformulation

Discontinued Car Polish

Allowing a new manufacturer to produce the discontinued product

Failure Analysis

Plastic Part, determined cause of brittleness to prevent cracking part

Product Discoloration

Analyzed product packaging to determine cause of package discoloration

Let us help you solve your problem.

J O R D I

Problems That We Solve at Jordi

Product Deformulation

Product Formulation

Contract Analysis

Good-Bad Comparisons

Expert Witnessing

HPLC Method Development

HPLC Training and Installation Services

Polymer Analysis

Polymer Filler & Additives Quantitation

Preparative HPLC

Quantitative Analysis

Unknown Identification

Our Mission

Jordi FLP was founded in 1980 to provide the highest quality analytical services and polymer based HPLC columns and packing media in the industry. As a family company, we take pride in the services we provide. Our customers come from a diverse background, including the polymer, pharmaceutical and specialty chemical industries. It is our goal to help our customers overcome their analytical challenges by providing excellent products and personal assistance from our highly trained staff. If you are tired of being treated like a number, give us a call for the personal assistance you deserve.

Techniques That We Offer at Jordi

Chemical Methods (titrimetry, extractions, etc.)

Elemental Analysis (PIXE, INAA)

Fourier Transform Infrared Spectroscopy (FTIR)

Gas Chromatography (GC)

Gel Permeation Chromatography (GPC)

Light Microscopy

High Performance Liquid Chromatography (HPLC)

Mass Spectroscopy (MS)

Nuclear Magnetic Resonance (NMR)

Particle Analysis

Thermal Methods (DSC, TGA, TMA)

Supplemental Testing
